Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 9.835; Variance 4.583; scale 2.146

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    용
                                                                                                 The present cDNA sequence codes for a claimed single-chain antibody, codesignated e23(FV), which binds to erbB-2. Monoclonal antibody e23 was generated by immunising mice with NyerbB-2 cells overexpressing the 9pl85 protein, removing spleen cells and producing hybridomas by standard techniques. Messenger RNA coding for the anti-erbB-2 monoclonal antibody was isolated and converted to cDNA. Regions coding for the heavy- and light- chain variable regions were then amplified by PCR and joined via a sequence encoding a peptide in the resulting single-chain antibody is useful for in vitro diagnosis of tumour cells which overexpress the erbB-2 gp185 marker, e.g. breast, ovarian and non-small cell lung carcinomas, and, when coupled to a cytotoxic agent, to treat such tumours. So Sequence 711 BP; 175 A; 182 C; 189 G; 164 T;

A nucleac acid comprises a first sequence encoding a signal peptide (R94019) linked to a second sequence (T17728) encoding a single chain Fv fragment (R94020) that binds a human erbB2 oncoprotein.

The anti-erbB2 sFv portion is obtained by PCR using e23scFv plasmid as template. The signal peptide directs the scFv to the endoplasmic reticulum. The nucleic acid is incorporated into a plasmid or viral vector to facilitate expression of the scFv antibody homologue within e.g. an epithelial carcinoma cell. Intracellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LT 3

Mouse anti-human Factor IX antibody BC2 light chain cDNA. Thrombosis; therapy; Factor IX; anticoagulant; monoclonal arhumanised antibody; antibody engineering; light chain; CDR; complementarity determining region; myocardial infarction; angina; attial fibrillation; stroke; kidney damage; pulmonary embolism; deep vein thrombosis; coronary angiople; sincomplemental intravascular coagulation; artificial organ; sincomplemental coagulation; sincomplemental coagulation; sincomplemental coagulation; sincomplemental coagulation; sincomplemental coagulation; sincomplemental coagulation; sincomplemental coagu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This cDNA sequence encodes a mouse-human chimeric antibody light chain (W24532) in which the variable region is derived from mouse anti-human factor IX monoclonal antibody BC2 cDNA (see T79899) and human sequences from the immunoglobulin RF-TS3 CL framework. It was obtained by PCR amplification (see T79897-98) of BC2 cDNA and insertion of the PCR product into F9HZHC 1-3 cDNA (see T77374). Claimed anti-Factor IX chimeric antibodies are useful in the treatment of thrombosis.

Wa4520) of mouse anti-human Factor IX monoclonal antibody BC2.

Claimed humanised antibodies (see W24510-18) contain CDRs (see

W24504-09) of BC2 heavy and light chains inserted into framework

regions of selected human antibody sequences. They have self-

limiting neutralising activity, and are useful as anticoagulant

agents in treatment of thrombosis associated with myocardial

dinfarction, unstable angina, atrial fibrillation, stroke, renal

claimed, pulmonary embolism, deep vein thrombosis, percutaneous

transluminal coronary angioplasty, disseminated intravascular

coagulation, sepsis, or artificial organs, shunts or prostheses

(claimed). Also claimed are chimeric antibodies (see T79900), and

Fab and F(ab')2 fragments. The claimed antibodies do not cause

uncontrolled bleeding (contrast heparin and warfarin) since they

provide only partial inhibition of coagulation.

The amplification resulted in the addition of ScaI, NarI ends to the VL region. The PCR product was ligated into ScaI, NarI-digested F9HZHC 1-3 (see T77374) and digested with ScaI, NarI to produce a mouse-human chimeric light chain F9CHLC (see T79900, W24532). Claimed anti-Factor IX chimeric antibodies are useful in the treatment of thrombosis.

                                                                                                                                                                                                                                                                                                                                                                                                                             The patentors claim a chimeric antibody molecule comprising 2 light chains and 2 heavy chains, each comprising a constant human region and a variable non-human region. Coding sequences for the Ig chains are also claimed. The invention provides consensus sequences of light and heavy chain J regions useful in the design of oligonucleotides (UIGS) for use as primers or probes for cloning immunoglobulinlight or heavy chain mRNAs or genes. Depending on the nature of design of a particular UIG, it may be capable of hybridizing to all Ig mRNAs or genes containing a single specific J sequence. UIG denotes universal immunoglobulin gene. The antibodies useful in passive immunisation avoiding negative reactions. They are also useful in assaying and in vitro imaging.

PT Improved prodn. of protein in Gram -ve bacteria using signal proved prodn. of protein of antibodies

PT the cytoplasm, esp. for prodn. of antibodies

PT the cytoplasm, esp. for prodn. of antibodies

PT the cytoplasm, esp. for prodn. of antibody. The 2H7 antibody recognises

CC region of the 2H7 mouse monoclonal antibody. The 2H7 antibody recognises

CC the human B-cell surface antigen Bp35, which plays a role in B-cell

CC with human B-cell antiben specificity, that was produced using the method of the invention. The method of the invention is for the production of a protein in a Gram-negative bacterium. The method improves on current techniques, by using a vector including DNA encoding the pectate lyase immunisation (Tay), particularly those with a human constant region, cc suitable for passive immunisation (without risk of serum sickness or canaphylaxis) or for in vivo/in vitro diagnosis and imaging. The Ig may also be used therapeutically, optionally coupled to toxins, etc.

CC anaphylaxis) or for in vivo/in vitro diagnosis and imaging. The Ig may calso be used therapeutically optionally coupled to toxins, etc.

CC anaphylaxis signal sequence means that the protein is exported from the cytoplasm and can be recovered from the culture medium or periplasm, in a critical sequence means that the protein is exported from the culture medium or periplasm, continued and these can now be changed to G, A or E

CC classes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PT dicistronic transcription unit with pectate lyase signal sequences PS Example; Fig 22; 95pp; English.

CC The present sequence encodes the light chain variable region of CC the 2H7 antibody. The 2H7 cDNA was used in the preparation of CC molecule comprises 2 DNA sequences encoding an Ig fragment. The DNA CC molecule comprises 2 DNA sequences encoding a pectate lyase secretion signal sequences respectively linked to a DNA sequence cc encoding an Ig Fd molecule or Ig light chain, operably linked to a Single prokaryotic promoter so as to form a dicistronic transcription unit, provided that the Ig fragment can bind an antigen and is produced and secreted by an E. coli host cell when CC the nucleic acid molecule is expressed in the host cell when CC manifyen and independent encourage of the production of recombinant antibodies, which can be used for passive immunisation CC without negative immune reactions (e.g. serum sickness and anaphylactic shock), in labelled forms as immunoassay or imaging creagents, in complement mediated lysis and for therapeutic purposes when coupled to a toxin or other therapeutic agent.

A cDNA clone (770869) codes for the light chain variable region (W16344) of the 2H7 mouse monoclonal antibody, which recognises human B-cell surface antigen Bp35. The sequence was isolated from a 2H7 cell line cDNA library by PCR amplification. The 2H7 heavy chain variable sequence (T60868) has also been isolated. The sequences have been used to construct a human-mouse chimaeric antibody with specificity for the human B-cell antigen. Sequence 426 BP; 100 A; 135 C; 93 G; 98 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                     PT transformed with dicistronic expression cassette

PS Example TY; Fig 22; 98pp; English.

CC The present sequence was used in the development of a novel method CC for the production of an immunoglobulin (1g) fragment capable of CC binding an antigen. The method comprises culturing an E. coli host CC that has been transformed with a nucleic acid molecule encoding the CC and secreted. The nucleic acid molecule comprises DNA sequences concoding the CC and secreted. The nucleic acid molecule comprises DNA sequences concoding at least the variable region of CC an Ig fd molecule; and (b) pectate lyase secretion signal sequence coperably linked to a DNA sequence encoding at least the variable region of an Ig light chain, where (a) and (b) are operably linked CC transcription unit. The method is used to produce chimeric Fab CC molecules, e.g. derived from murine monoclonal antibody 2H7 raised CC against human B-cell surface antigen. The invention provides a CC novel approach for producing genetically engineered antibodies of CC expression in genetically engineered argument DNA cloning and production of CC expression in genetically engineered organisms. The application of CC expression in genetically engineered organisms. The application of CC expression in stibodies, recombinant DNA cloning and production of CC expression in the efficient large scale production of human CC monoclonal antibodies. The invention also provides an effective solution for the efficient large scale production of human CC monoclonal antibodies. The invention also provides an solution to CC the problem of class switching antibody molecules.

Example IV, Fig 22; 98pp; English.

CC The present sequence was used in the development of a novel method CC for the production of an immunoglobulin (Ig) fragment capable of CC binding an antigen. The method comprises culturing an E. coli host that has been transformed with a nucleic acid molecule encoding the CC Ig fragment, under conditions so that the Ig fragment is produced CC encoding: (a) pectate lyase secretion signal sequence operably and secreted. The nucleic acid molecule comprises DNA sequence coperably dinked to a DNA sequence encoding at least the variable region of CC an Ig Fd molecule; and (b) pectate lyase secretion signal sequence operably linked to a DNA sequence encoding at least the variable region of CC as single prokaryotic promoter to form a dicistronic transcription unit. The method is used to produce chimeric Fab CC molecules, e.g. derived from murine monoclonal antibody 2H7 raised against human B-cell surface antigen. The invention provides a cc expression in genetically engineered antibodies of CC expression in genetically engineered antibodies of CC expression in genetically engineered antibodies of CC chemical gene synthesis, recombinant DNA cloning and production of the efficient large scale production of human cc constitution for the efficient large scale production of human cc constitution of class switching antibody molecules.

Production of lecombination in the development of a novel method CC The present sequence was used in the development of a novel method CC for the production of an immunoglobulin (Ig) fragment capable of CC binding an antigen. The method comprises culturing an E. coli host CC binding an antigen. The method comprises culturing an E. coli host CC binding an antigen. The method comprises bulturing an E. coli host CC in that has been transformed with a nucleic acid molecule encoding the CC Ig fragment, under conditions so that the Ig fragment is produced CC and secreted. The nucleic acid molecule comprises DNA sequences CC encoding: (a) pectate lyase secretion signal sequence operably CC inked to a DNA sequence encoding at least the variable region of an Ig light chain, where (a) and (b) are operably linked to a DNA sequence encoding at least the variable CC to a single prokaryotic promoter to form a dicistronic CC transcription unit. The method is used to produce chameric Fab CC against human B-cell surface antigen. The invention provides a CC novel approach for producing genetically engineered antibodies of CC desired variable region specificity and constant region CC expression in genetically engineered organisms. The application of CC chemical gene synthesis, recombinant DNA cloning and production of chemical gene synthesis, recombinant DNA cloning and production of constant of or the efficient large scale production of human more cloned in thodoles. The invention also provides a solution to the combinant of class switching antibody molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δÃ
